

Project Methodology

Scrum

We have chosen Scrum as our work method. It suits our development style and helps us organize our workflow. The sprint length for this project is 1 week, because it's a short project and two weeks is almost half the project length.

Meetings

The daily meetings that you have in a normal Scrum-organization doesn't fit us too good. We are going to have a continuous communication over the day instead. Monday, Tuesday and Friday are our set meeting-days for planning and evaluating of the sprint.

Project Owner and Scrum Master

Each week has a new Project Owner and Scrum Master as we feel that this is a learning experience and everyone needs to test every position in the project.

Velocity

As we are 4 members of the team we feel that 20 is a good velocity. It's evenly divisible with 5 (number of days in a week) and 4. That makes it easy to calculate what one person can do per day or week. It's also easy to accelerate and/or decelerate from that number.
