Sprint 4 - Retrospective

We didn't estimate time for every task. This is because we have written the papers for the electricity innovation challenge and made a movie together. For writing documents and filming we have booked about 10 hours of meetings. This weeks goal was to fix bugs that we found during testing, as the bugs needs to be fixed we have said that it takes as much time as needed. The rest is planned for this friday (16/10) as we have the retrospective and are looking into what bugs we still got left.

This week the form has generally been looser and some stress is starting get to the group. The week has felt more chaotic than usual. The work have been more out of our comfort zone revolving mainly about how to present the project in a nontechnical way.

Scope creeping is very easy now when we can see the finish line and want to add just few more features or design elements.

The next sprint will be a bit slower as we have the presentation and upcoming exams in other courses.
